

JY99-IIDN Ultrasonic Homogenizer

Ultrasonic Processor JY98-IIDN (1200W, 20KHz) is a powerful and reliable ultrasonic device for the sonic dispersion of larger samples in the lab. Typical application include: Homogenization, Nano Partical Dispersion, lyses and cell disintegration, protein extraction and the emulsification of liquids.

Features:

- LCD display, Microprocessor controlled and completely programmable
- Auto-tuning for convenience of use and optimal processing efficiency, Time setting
- Integrated Sound Abating Chamber to reduce cavitation sound emitted during processing
- All D models with temperature indicator and controller
- Variable power output: 0-1200W
